## **Management Discussion of Fund Performance**

### **Results of Operations**

For the six-month period ended June 30, 2023, the NBI Canadian Bond Private Portfolio's Advisor Series units returned 2.45% compared to 2.51% for the Fund's benchmark, the FTSE Canada Universe Bond Index (CAD). Unlike the benchmark, the Fund's performance is calculated after fees and expenses. Please see the *Past Performance* section for the returns of all of the Fund's series, which may vary mainly because of fees and expenses.

Certain series of the Fund, as applicable, may make distributions at a rate determined by the manager. This rate may change from time to time. If the aggregate amount of distributions in such series exceeds the portion of net income and net realized capital gains allocated to such series, the excess will constitute a return of capital. The manager does not believe that the return of capital distributions made by such series of the Fund have a meaningful impact on the Fund's ability to implement its investment strategy or to fulfill its investment objective.

The Fund's net asset value rose by 37.04% over the period, from \$4.715 billion as at December 31, 2022 to \$6.462 billion as at June 30, 2023.

The increase stemmed mainly from unit purchases by investors in the Fund and a rebalancing of the managed solutions offered by NBI.

The new year got off to a roaring start on rising hopes for a soft landing for developed economies as inflationary pressures showed signs of abating and the Federal Reserve downshifted their pace of tightening. Hopes for an imminent end to rate hikes and a dovish policy pivot were dashed in the wake of unrelenting signs of resilient growth, an overheated labour market, sticky inflation, and some hawkish central bank rhetoric that prompted a shift in investor expectations towards higher interest rates for longer. In March the collapse of Silicon Valley Bank, Signature Bank, Credit Suisse and the fear of more contagion in the banking sector caused a powerful flight-to-quality bid into government bonds that brought back memories of the financial crisis in 2008. Governments and Central Banks moved very quickly to contain the situations. The Bank of Canada increased its target for the overnight rate in January by 25 basis points to 4.50%, bringing cumulative rate hikes to 425 bps for the cycle. At this time the Bank also indicated they will pause to see the impact of the interest rate increases on the economy.

After decreasing for most of the first quarter, North American yields were much higher over the second quarter especially at the front end of the curve. The quarter started off with yields moving lower in belief that the regional banking crisis would tighten lending standards, and that the Federal Reserve would pause after hiking in early May to assess the impact of the 500 basis points of tightening. Then a series of events reversed the direction of the bond market, first the US debt ceiling was raised which removed a bid for US Treasuries.

The fiscal situation remains challenging for the bond market with the deficit running at more than 7% of GDP over the last year. Another factor putting upward pressure on yields was persistently high core inflation and then growth continued to surprise to the upside. As expected, the Fed did not raise its policy rate in June after 10 consecutive rate hikes, but Chair Powell was adamant that they are not done, and more rate hikes will be needed this year to bring inflation back down to target. Investors are coming around to the idea that the expected economic slowdown will be delayed and that the FOMC will keep rates higher for longer. The Bank of Canada surprised investors and restarted its tightening campaign in June after a 5-month hiatus. The Bank increased rates twenty-five basis points to 4.75% on the back of strength in consumption and housing along with a tight labor market and sticky inflation. The previous 425 basis points of rate hikes failed to put demand and supply into balance and to get inflation on a sustainable path to 2%. The market is also looking for at least one more interest rate increase later in the summer.

Absolute return of the Fund was positive during the first half of the year, yet the Fund underperformed the benchmark. Duration and yield curve positioning helped performance as the Fund was set up for higher rates and a flatter curve. Spreads and Carry were also positive drivers for performance, especially in the second quarter of 2023. The Fund's credit overweight and Federal underweight also contributed to the performance.

#### **Recent Developments**

To start the third quarter of 2023, the Fund has a higher duration and a higher running yield relative to the index. The Fund has an overweight position in Financial and Real Estate bonds. Over the first half of the year, the portfolio manager increased the weighting to the 3 to 5 years maturity range. He decreased the allocation to A's, increasing allocation to AAA'S.

The labour market is not showing significant signs of cooling, consumers are continuing to spend, and inflation is not falling fast enough. The Bank of Canada hiked rates in June and we expect them to go at least one more time this year. The base case remains a modest recession but if the Bank of Canada continues to hike rates the probability of a hard landing increases. Monetary policy is restrictive, and we expect growth and inflation to fall over time. The Federal Reserve is also getting close to finishing its tightening campaign. However, the portfolio manager expects rates will have to be kept elevated for a long period of time before sticky inflation falls back to the 2% target. Portfolio duration ended June close to its benchmark, but he was both long and short the Index during the quarter. He will continue to trade the portfolio as he expects the market to be very volatile as participants try to determine when central banks will finish hiking and then the timing of the first interest rate cut. Corporate spreads generally reflect the base case of a modest recession, but if they tighten to quickly, he will look to take profits or if they widen to reflect a significant slow down, he will increase the exposure.

On May 1, 2023, the Fund's independent review committee (the "IRC") was increased to four members when Stéphanie Raymond-Bougie was appointed as IRC member.

On or about May 3, 2023, the management fee for the Advisor Series of the Fund was reduced to 0.70%. On the same date, the maximum annual trailing commission of the Advisor Series was reduced to 0.50%.

#### **Past Performance**

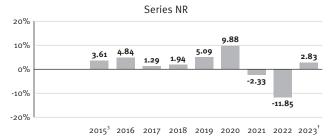

The performance of each series of the Fund is presented below and calculated as at December 31 of each year. It assumes that all distributions made in the periods shown were reinvested in additional securities and does not take into account sales, redemption charges, distributions, or optional charges that would have reduced returns. Past performance of a series of a Fund does not necessarily indicate how it will perform in the future.

#### **Annual Returns**

The bar charts indicate the performance for each the Fund's series in existence greater than one year during the years shown, and illustrate how the performance has changed from year to year. They show, in percentage terms, how much an investment made on January 1 (or made commencing from the start of the series) would have grown or decreased by December 31 of that year, in the case of the Annual management report of fund performance, or by June 30, in the case of the Interim management report of fund performance.

<sup>(</sup>i) This information is derived from the Fund's Annual Audited Financial Statements and Interim Unaudited Financial Statements. The net assets per unit presented in the financial statements might differ from the net asset value calculated for fund pricing purposes. The differences are explained in the notes to the financial statements.

<sup>(2)</sup> Net assets and distributions are based on the actual number of units outstanding at the relevant time. The increase or decrease from operations is based on the average number of units outstanding over the accounting period.

 $<sup>^{(9)}</sup>$  Distributions were paid in cash or reinvested in additional units of the Fund, or both.

<sup>(4)</sup> The net assets are calculated in accordance with IFRS.

 $<sup>^{(5)}</sup>$  This information is provided as at the last day of the accounting period shown.

<sup>(6)</sup> Management expense ratio is based on total expenses including sales taxes for the accounting period indicated (excluding commission, other portfolio transaction costs and withholding taxes) and is expressed as an annualized percentage of daily average net value during the accounting period.

<sup>(2)</sup> The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net asset value during the accounting period. The trading expense ratio includes, if necessary, the trading expenses from its underlying funds, as described in Article 15.2 of Regulation 81-106.

<sup>(8)</sup> The Fund's portfolio turnover rate indicates how actively the Fund portfolio's manager manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the accounting period. The higher a Fund's portfolio turnover rate in an accounting period, the greater the trading costs payable by the Fund in the accounting period, and the greater the chance of an investor receiving taxable capital gains in the accounting period. There is not necessarily a relationship between a high turnover rate and the performance of a Fund.
